## PoPup solution: overLIB 4.10

Posted by Mystique - 2006/05/25 23:31

---

This is just an FYI post. I was getting a popup message:

"The "overLIB 4.10 is required for the HideForm plugin"

Clearing temp. internet files, cache, history, cookies has fixed this popup for me.. so if you're getting this error whenever you load a page you may want to try this as well. :)
