Hi guys for almost 10 years I suffered Astigmatism and it's been a killer to me esp. for the things that I do everyday. And earlier as I was surfing over the net about Lasik thing I saw an important information about how to determine if you're a Lasik candidate or not, and since im planning to undergo Lasik sooner or later this year I want to share this information to you all because I know that it can be helpful to some people who also have the same concern like mine. Anyway, there are three questions you can ask yourself before moving forward first, are you over 18? Second, have you had stable vision for the past year? And third, is your goal to see clearly without glasses or contacts? I took this information from my2020. Hope it helps you in a little way.
